

EXPERIENCE

Office of Water Programs	Full Stack Developer	May 2024 - Present
- Modernized the frontend architecture by migrating from legacy tooling to Vite and implementing granular code-splitting and lazy loading, reducing initial bundle size by 50–60% and significantly improving application load performance. - Led the development of a Stormwater Analytics Web Platform using React, TypeScript, Python (Flask), and Pandas, enabling real-time contamination analysis and interactive visualizations for research engineers and government stakeholders, translating complex technical data into actionable insights. - Designed and implemented a containerized microservice architecture using Docker and Nginx, enabling reproducible local and CI environments and improving deployment reliability across development teams. - Developed reusable TanStack Query data-fetching hooks with centralized error handling, eliminating repetitive boilerplate and improving frontend development efficiency. - Accelerated feature delivery by implementing an AI-assisted multi-agent development workflow that decomposed complex full-stack tasks into modular subtasks, improving daily development throughput by ~30%. - Implemented CI/CD automation with Bitbucket Pipelines and Playwright E2E tests, reducing environment inconsistencies and lowering runtime defects by 30%. - Architected an automated data ingestion and processing pipeline that reduced weekly reporting workflows from 30 minutes to under 40 seconds and optimized SQL report generation from 80 minutes to <5 seconds.		
Tata Consultancy Services	Backend Developer	Jun 2019 - Oct 2022
- Designed a high-throughput event-driven ingestion pipeline using JAVA, Spring Boot and RabbitMQ to asynchronously process 10,000+ daily SAP IDocs, enabling reliable large-volume enterprise data analytics. - Designed and developed a configurable automation rules engine for Closed-Loop Incident Remediation that parsed alert payloads and triggered automated recovery scripts, eliminating manual L1 support for recurring SAP failures. - Improved API and database performance by 60–75% by resolving Hibernate N+1 query issues, implementing JPA batch processing, and optimizing database indexing. - Architected a centralized API Gateway using Spring Cloud Gateway and Netflix Eureka, enabling scalable API management, service discovery, and load balancing across distributed microservices. - Built high-performance backend APIs powering enterprise monitoring dashboards by aggregating data from multiple microservices in parallel, delivering near real-time operational analytics.		

PROJECTS

Agentic AI Sales Copilot (*Google ADK, Gemini LLM, Vector Search, Python*)

- Built an agentic AI shopping assistant using Google's Agent Development Kit (ADK), designing modular multi-agent workflows powered by LLMs (Gemini) with tool integration, session management, and vector-based search.

Agentic AI Travel Planner (*Google ADK, Gemini 2.0, Multi-Agent Systems, Google Search API, OpenStreetMap, Python*)

- Built a multi-agent AI system using Google ADK with a root orchestration agent delegating tasks to specialized agents (Inspiration, News, Places). Integrated real-time retrieval via Google Search (Agent Tool) and OpenStreetMap APIs (Function Tool), implementing LLM-powered workflows, agent orchestration, and modular Python architecture.

SKILLS

AI & LLM	Google Agent Development Kit (ADK), Gemini API, Retrieval-Augmented Generation (RAG), Multi-Agent Systems, LLM Tooling & Orchestration, Vector Retrieval, Prompt Engineering
Database	MongoDB, MySQL, SQLite, Neo4J, PostgreSQL
DevOps	Docker, Nginx, Bitbucket Pipelines, Jenkins, Playwright (E2E)
Languages	Java 17+, JavaScript (ES6+), TypeScript, Python, HTML5, CSS/SASS, SQL, C++, PHP
Frameworks	Spring Boot, React, Redux, Next.js, Tailwind CSS, Flask, Selenium, JDBC, JPA/Hibernate, Tanstack Query

EDUCATION

Master of Computer Science	California State University Sacramento (<i>GPA: 3.85</i>)	Aug 2022 - Dec 2024
Master of Computer Application	Medicaps University, India (<i>GPA: 3.4</i>)	Aug 2017 - May 2019
